

# Jade Cheng

984-484-0239 | jadecheng2027@gmail.com | haojingcheng-jade.github.io/jade-cheng/

## EDUCATION

### Duke University

Master of Science in Statistical Science; GPA: 3.7

Durham, NC

Aug 2025 – May 2027 Expected

### Communication University of China

Bachelor of Engineering in Data Science; GPA: 3.8, Ranking: Top 3

Beijing, China

Sep 2021 – Jun 2025

## EXPERIENCES

### Lenovo | Python, Machine Learning, AWS

Data Scientist – Price Sensitivity Analysis

Jul 2026 – Present

Morrisville, NC

- Built an end-to-end **ETL pipeline** to clean and integrate **4 years of daily** pricing, sales, revenue, margin, and product data for price sensitivity analysis and machine learning modeling.
- Developed an interactive **machine learning pricing system** to forecast units sold, revenue, and margin under different pricing scenarios, helping business users evaluate potential pricing impact.
- Used **AWS S3 and Athena** for data storage and querying, and implemented backend prediction services, an HTML dashboard, and visualizations to compare pricing scenarios and interpret key drivers.

### Cormetech | Python, SSMS, Airflow

Data Engineer Intern

May 2026 – Present

Durham, NC

- Built automated **ETL pipelines** with Python and SQL to extract, transform, and load manufacturing data from **SQL Server databases** into standardized internal tables for downstream reporting and analytics.
- Encoded machine operating logic to identify running, downtime, changeover, and abnormal modes for production metric calculation and anomaly analysis.
- Developed interactive **HTML dashboards** for each production step to track actual-vs-target performance and analyze operational variance.
- Migrated data for **500+ production orders** by cleaning source data and redesigning SQL Server tables, field structures, and relationships.

### Industrial and Commercial Bank of China | SQL, Python, Power BI

Data Analyst Intern

Jun 2023 – Aug 2023

Beijing, China

- Queried and cleaned customer activation, transaction, and app-binding data with **SQL and Python** to support student banking behavior analysis and digital channel reporting.
- Built **Power BI dashboards** to visualize activation funnels, conversion rates, customer segments, and channel performance for stakeholder review.
- Prepared campaign analysis datasets for email, SMS, and in-app advertising strategies, supporting A/B testing analysis and a **5.8% lift** in card-binding conversion rate.

## PROJECTS

### News Recommendation System with LLM Explanations | Python, LLM API

Aug 2024 – May 2025

- Built an end-to-end **news recommendation system** with data cleaning, user click history processing, article text feature engineering, model training, and evaluation workflows.
- Developed a personalized **ranking pipeline** to generate recommendations from user click histories and article-level text features, evaluating performance with AUC, Recall, and ranking-based metrics.
- Integrated an **LLM API** to generate natural-language explanations for recommended articles, using prompt engineering and output validation to improve relevance, consistency, and readability.

## SKILLS

**Data Engineering:** ETL Pipelines, Data Cleaning, Data Validation, Data Modeling, Workflow Automation, Data Visualization

**Programming & Tools:** Python, SQL, R, SSMS, Airflow, Power BI, Tableau

**Data & Cloud:** AWS S3, Athena, Pandas, NumPy, Excel, Git

**Analytics:** A/B Testing, EDA, Time-Series Analysis, Regression, Model Evaluation

**Languages:** Mandarin Chinese(Native), English(Advanced)
