EDUCATION

Duke University

Master of Science in Statistical Science; GPA: 3.7

Durham, NC

Aug 2025 – May 2027 Expected

Communication University of China

Bachelor of Engineering in Data Science; GPA: 3.8, Ranking: **Top 3**

Beijing, China

Sep 2021 – Jun 2025

EXPERIENCES

Lenovo | Python, Machine Learning, AWS

Data Scientist – Price Sensitivity Analysis

Jul 2026 – Present

Morrisville, NC

- Built an end-to-end **ETL pipeline** to clean and integrate **4 years of daily** pricing, sales, revenue, margin, and product data for price sensitivity modeling.
- Developed an interactive **machine learning pricing system** to forecast units sold, revenue, and margin under different pricing scenarios.
- Implemented backend prediction services, an **HTML dashboard**, and visualizations to help business users compare pricing scenarios and interpret key drivers.

Cormetech | Python, SQL, SSMS, Airflow

Data Engineer Intern

May 2026 – Present

Durham, NC

- Built automated **ETL pipelines** with Python and SQL Server to clean, transform, and load production data into internal databases.
- Encoded machine operating logic to identify running, downtime, changeover, and abnormal modes for production metric calculation and anomaly analysis.
- Developed interactive **HTML dashboards** for each production step to track actual-vs-target performance and analyze operational variance.
- Migrated approximately **500+** production order records by cleaning source data and redesigning SQL Server tables, field structures, and relationships.

Industrial and Commercial Bank of China | SQL, PowerBI, A/B Test

Data Analyst Intern

Jun 2023 – Aug 2023

Beijing, China

- Queried customer activation, transaction, and app-binding data with SQL, and used Python to identify **back-to-school student demand** across card activation, account binding, and digital channel usage.
- Built **Power BI dashboards** to visualize activation funnels, conversion rates, customer segments, and channel performance, helping stakeholders interpret digital adoption trends and campaign results.
- Designed **A/B testing analysis** for email, SMS, and in-app advertising strategies, contributing to a **5.8% lift** in card-binding conversion rate.

PROJECTS

News Recommendation System with LLM Explanations | Python, LLM API

Aug 2024 – May 2025

- Implemented and benchmarked multiple **news recommendation models**, including TF-IDF, DKN, NRMS, and NAML, using user click histories and article-level text features.
- Built end-to-end data preprocessing, feature engineering, model training, and evaluation workflows, and compared recommendation performance using **AUC, Recall, and ranking-based metrics**.
- Integrated an **LLM API** to generate natural-language explanations for recommended articles, using prompt engineering and output validation to improve relevance, consistency, and readability.

SKILLS

Data Science: Machine Learning, Statistical Modeling, Model Evaluation, A/B Test, EDA, Regression, Time-Series Analysis

Programming & Tools: Python, SQL, R, SQL Server, Airflow, Power BI, Tableau

Data & ML: Pandas, NumPy, scikit-learn, AWS, Excel, Git

Languages: Mandarin Chinese(Native), English(Advanced)
